Benefits

- Non surgical treatment
- No side effects
- Accelerates healing
- Affordable
- Coverage available from most insurance companies

A shockwave is an intense, but very short energy wave traveling faster than the speed of sound. The basic technology involved with extracorporeal shockwave technology has been used for decades on millions of people.

Therapy sessions are short, usually 20 – 30 minutes in length, and provide successful relief of chronic pain and restores mobility painlessly. Permanent relief typically begins about 72 hours following treatment.
